MTAT.08.021 System Administration
AsteriskNOW

Install a complete Asterisk system with a user-friendly graphical user interface in less than 30 minutes.

Install Asterisk and start building custom telephony applications with AsteriskNOW. AsteriskNOW installs a complete Linux distribution, Asterisk, the DAHDi driver framework, and your choice of the FreePBX administrative GUI, the AsteriskGUI or no GUI at all.

AsteriskNOW makes it easy to create custom telephony solutions by automatically installing the "plumbing". Much of the complexity of Asterisk and Linux is handled by the installer and the administrative GUI. Application developers and integrators can concentrate on building their solution.
AsteriskNOW

Motto
- Install a complete Asterisk system with a user-friendly graphical user interface in less than 30 minutes.
