S1: Analysis of the intended and emergent effects of new services
Privacy-preserving Technologies / LTAT.04.007

Dan Bogdanov
dan.bogdanov@cyber.ee
Seminar, part 1

- Divide into five groups
- The lecturer will give each group one topic from the list on the course website
- Members of each group will read the first article under that topic
- One member of your team will present to the class orally the explicit properties of the planned system (motivating properties, expectations).
- A second member of your team will present to the class orally the stakeholders, data elements and basic data flow you were able to elicit from the article. Describe the expressed privacy protection approach, if any.
- Both presentations can be 2-4 minutes. You can use the board.
Seminar, part 2

- Stay within the same groups.
- Members of each group will read the **second article** under that topic
- The third member of your team will present to the class orally the emergent properties of the system (side effects, unintended functionalities)
  - If no third member is available, please have one of the first two perform again.
- The presentation can be 2-4 minutes. You can use the board.
- After the group presentations are done, we will have a class-wide discussion on the topic for some minutes.
