CTF content editor and module generator

Who?

CTF TECH is an Estonian cybersecurity company whose mission is to introduce students to the field of cybersecurity through gamified Capture-The-Flag-type of events.

What?

Web application to help with CTF content management. All of our events have a mission board which consists of different challenges. Challenges and the mission board is defined in json format.

Developed web application would allow to generate and edit the json files for the mission board through a web interface.

The application would also serve as a challenge archive. Application would be connected to GIT where versioning of the challenges is held.

Very basic draft of web application which displays some of the desired functionalities (not design)

Conditions

CTF Tech requires to own the software and IP for the project outcome.
