Tasks

• Consider Meeting Scheduler System.
  • What are the social-technical relationships between the stakeholders of the Meeting Scheduler system? To support your answer, create a strategic rationale dependency model (using the i* modelling language), where technical viewpoint (late requirements) of the given case is illustrated.
  • How these relationships could be fulfilled? To support your answer, create the strategic rationale model (for the Scheduler)

• Use KAOS modelling languages and refine one goal (e.g., “Meeting be scheduled”) from the i* model to the goal hierarchy (containing at least 4 hierarchy levels and including at least 2 alternative refinements). Your model should separate between requirements and expectations

Task could be done individually or in team – 2-3 people
